

## Precautions for Post-Invasive Treatment of Department of Pain Management 疼痛科侵入式治療 後注意事項(英文)

---

### Instructions for post-surgery home care on discharge day

- Invasive treatment refers to the treatment or diagnosis performed on patients with injection needle, radio frequency probe or other syringe.
- Injection Needle Pore Care: Needle pores from injection without cut or wound does not require dressing change.
- Please remove the gauze used for covering the needle pore on the second day.
- Avoid showering or bathing on the day of treatment. Restore normal routines starting from the second day.
- To apply cold compress on the needle pore, please follow the instructions given by the nurses that day.
- Wound with cut: To change dressing or remove stitches, please follow the instructions given by the nurses that day and for return visit.

### Precautions for Home Care and Medication

- Please follow the original prescription drugs for continual administration.
- In case oral medicine or external medicine is prescribed on the day of treatment, please follow the instructions and precautions on the prescription medicine bag.
- Medicine Consulting Hotline: (04)22052121 EXT#3154.

### Motion Precautions

- The root of injection wound may continue to ache for about 24 ~ 48 hours and is regarded as normal reaction.
- Regardless of local anesthesia or general anesthesia, avoid driving, scooter riding, or climbing to a high altitude on the day of treatment.

### Food Precautions

- With the exception of special medical advice, patients may maintain normal diet after home.

### Special Precautions

In case of the following circumstances, please consult us via ( 04 ) 22052121 EXT# 5236 to determine if a return visit to the hospital is necessary.

- New numb or weak perception on the lower limb for over 24 hours.
- Continuous fecal and urine incontinence for over 24 hours.
- Continuous headache or vomit for over 24 hours.
- Loss or significantly weakened vision for over 12 hours.

### Instructions for Emergency Return Visits

- Unusual excessive bleeding.
- Significant changes in consciousness (e.g. coma, confusion of consciousness).

### Next Return Visit

- Under normal circumstances, please return visits according to the appointment hour.
